

BIOBALL

ECO FRIENDLY BIOLOGICAL CAGED URINAL CUBES

www.wesproducts.co.uk

HOW DOES THE BIOBALL WORK ?

Every time the urinal is used or flushed fluid passes over the BIOBALL and erodes a small amount of friendly bacterium into the drain.

The bacterium then replicates itself while it devours foul odour causing bad bacterium and softens the hard uric scale deposits ensuring the drain remains serviceable and hygienic, the flushing water assists the bacterium to move down the drain consuming more waste as it goes.

KEY BENEFITS

- Completely ECO Friendly
- Reduces Foul Urinal Odours
- Keeps Your Urinal Drains Clear
- Prevents Urinal "Backing Up"
- Imparts Pleasant Fragrance
- Negates Need For Aggressive Chemicals
- Significant Water Saving Potential with reduced flushing
- Quick Payback On Rentals
- Better than Std Urinal Cubes
- Reduces Plumber Call Outs
- Reduces Cleaning Costs
- No Install Issues

"The BIOBALL has been used on our sites with very good results and has been easy to manage throughout"

"The water savings have been very noticeable and worthwhile"

HOW THE BIOBALL IS FITTED

The BIOBALL has no installation costs it is simply placed directly into the urinal bowl or if required an optional holster with suction cups can be secured to the urinal.

The flushing rate can then be significantly reduced and adjusted to the customers needs saving water and money.

Our Biological Multi-Purpose Washroom Cleaner is used to spray the urinal bowl and surrounding areas during normal washroom cleaning duties.

This not only cleans and fragrances without using harsh chemicals it also tops up the friendly bacterium and allows them to work in and around the urinal as well as the drains.

The BIOBALL complies with the requirements of building and water regulations and is a “Waterwise” listed product.
